

## **SFWMD SCADA Overview**

- **What's SCADA?**
- **SCADA at the District: a brief history**
- **SCADA improvements: driving forces**
- **What is the Water Management System?**
- **Ongoing WMS efforts**

## What's SCADA?

- Supervisory control and data acquisition
- Category of software application program
- SCADA systems include hardware and software components
- **Scans** all remote data
- **Logs** data and system events
- **Alarms** abnormal conditions
- Sends operator commands to remote devices

## **SCADA at the District: A Brief History**

### **Communication and Control (C&C) System**

- **1940-70s: build out of the flood-control infrastructure**
- **1976: installation of the current C&C system (18 gates, no pumps)**
- **1976-2000: expansion of microwave and remotes (more than 80 gates and pumps)**
- **2000-present: conversion to Motorola MOSCAD remotes (more than 75 gates and pumps)**

## **SCADA at the District: A Brief History**

### **Hydrometeorologic Monitoring System**

- **1970: Legislature expanded District mission to include environmental mission elements**
- **1987: First electronic recorders installed (Dairy Project, 22 sites)**
- **1990-1994: Standardized on Campbell Dataloggers**
- **1992: Hurricane Andrew initiated RF telemetry**
- **2001-present: Begin conversion to LoggerNet**

# **SCADA at the District: A Brief History**

**Two significant data acquisition and processing systems**

- **Duplicate instrumentation at same sites**
- **Duplicate communications and processing systems**
- **Complex methods to share data between systems**

# **WMS System Expansion**

## **Driving Factors**

- **Everglades Construction Program**
- **Consolidated Everglades Restoration Plan**
- **Capital improvements**
- **Statutory and other legal mandates**

## 10-Year Site & Sensor Projection

## 10-Year Site Cost by Program - \$76M

# WMS Needs Assessment

## Major Recommendations

- Replace the existing central SCADA system
- Develop a detailed field infrastructure plan focussing on communications
- Develop a comprehensive data access and archive requirements plan

## What is the District Water Management System?

## WMS Components: Field Infrastructure

### Systems

- Sensors—environmental, structure monitoring
- Actuators—pump, gate control
- Remote Terminal Units (RTUs)  
—RACUs, MOSCADS, CR10s
- Data acquisition, test, maintenance, problem-tracking systems

### Operations

- Canals, levees, gates, pump stations, ASRs
- Water Resources Management
- Public Works
- External stakeholders (DEP, USACOE, USGS, Public, etc.)

**ESDA & OMD**

## WMS Components: Communications

### Systems

- Microwave backbone
- Spread-spectrum
- RF feeder networks
- District WAN interfaces (T1, etc.)

### Operations

- Ethernet LAN
- Intranet (District)
- Internet (external)
- WPB SONET (campus) backbone

(ITD) Network Engineering

## WMS Components: SCADA Central (Supervisory Control and Data Acquisition)

### Systems

- Software/hardware systems for data acquisition and control
- System administration
- Software development
- 24/7 support

### Operations

- Operations Control Center (OCC) staff
- Water managers
- SCADA technicians
- OMED engineers & meteorologists

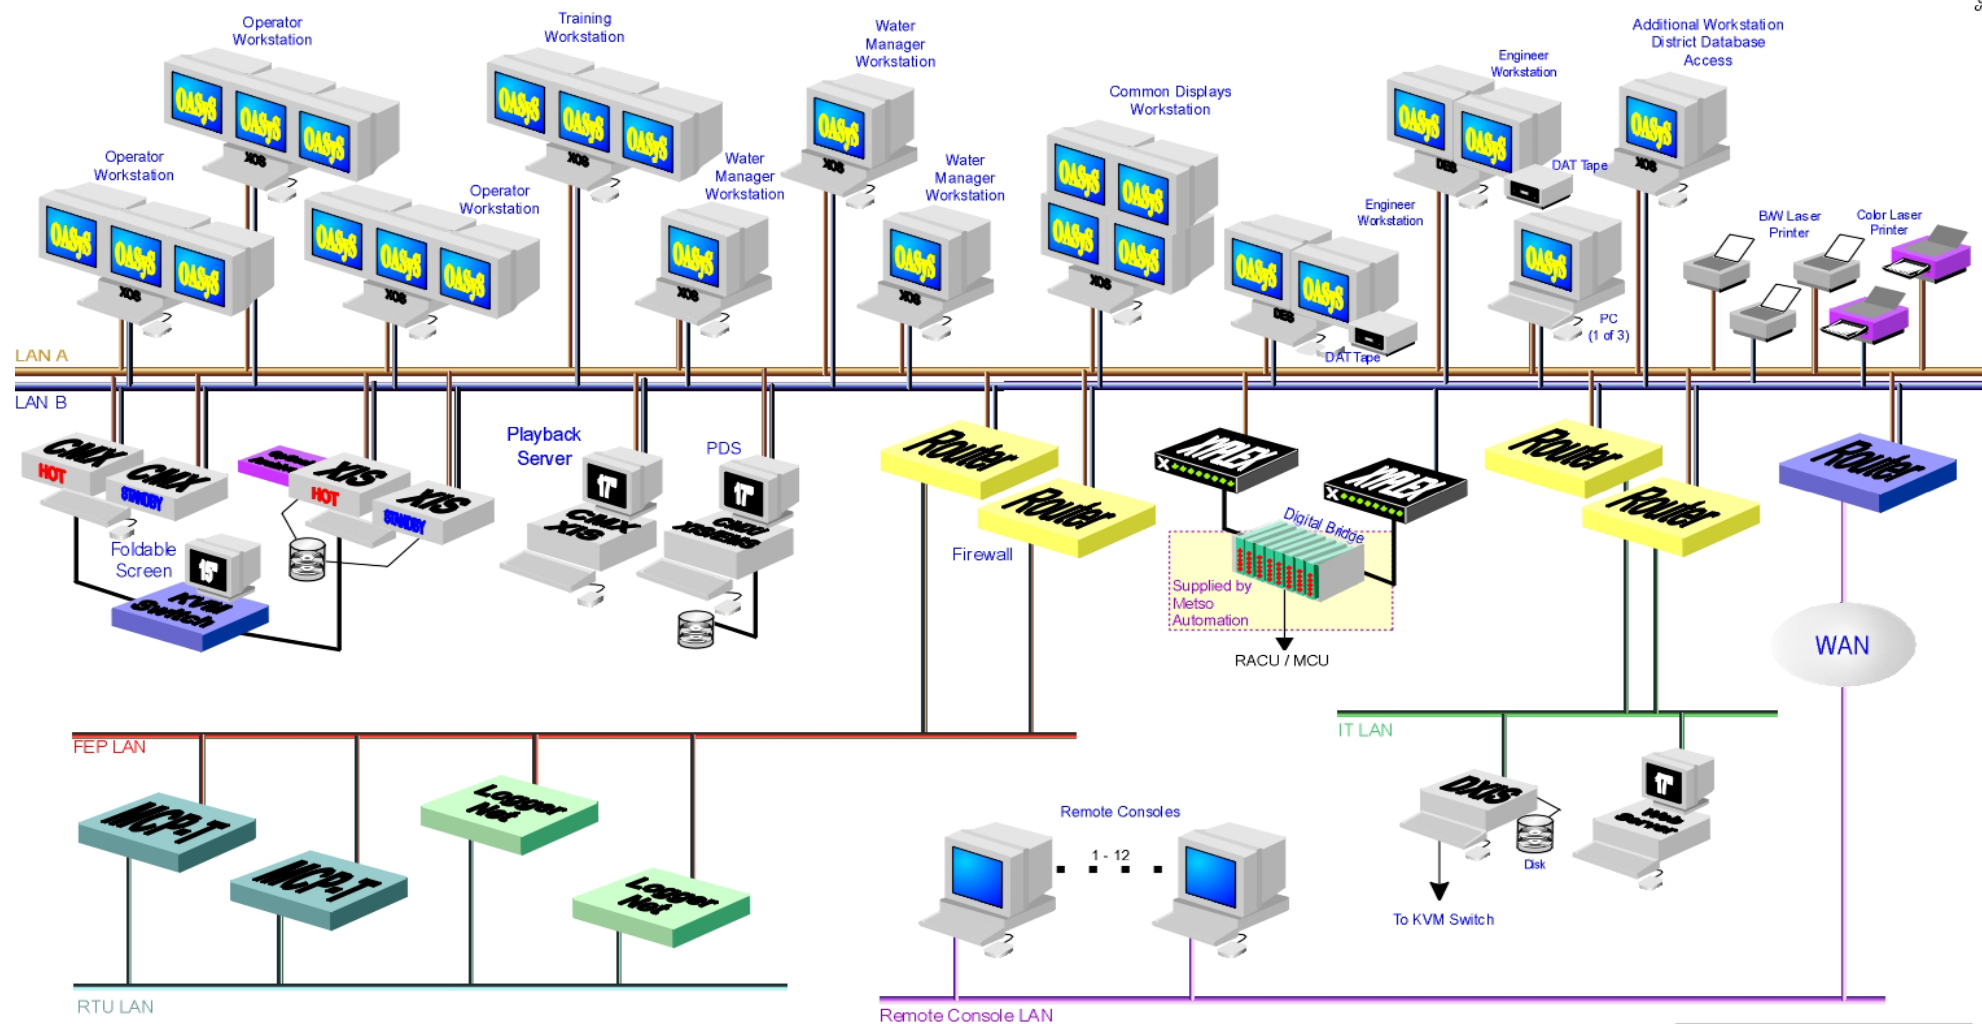

(ITD) Infrastructure/OCC

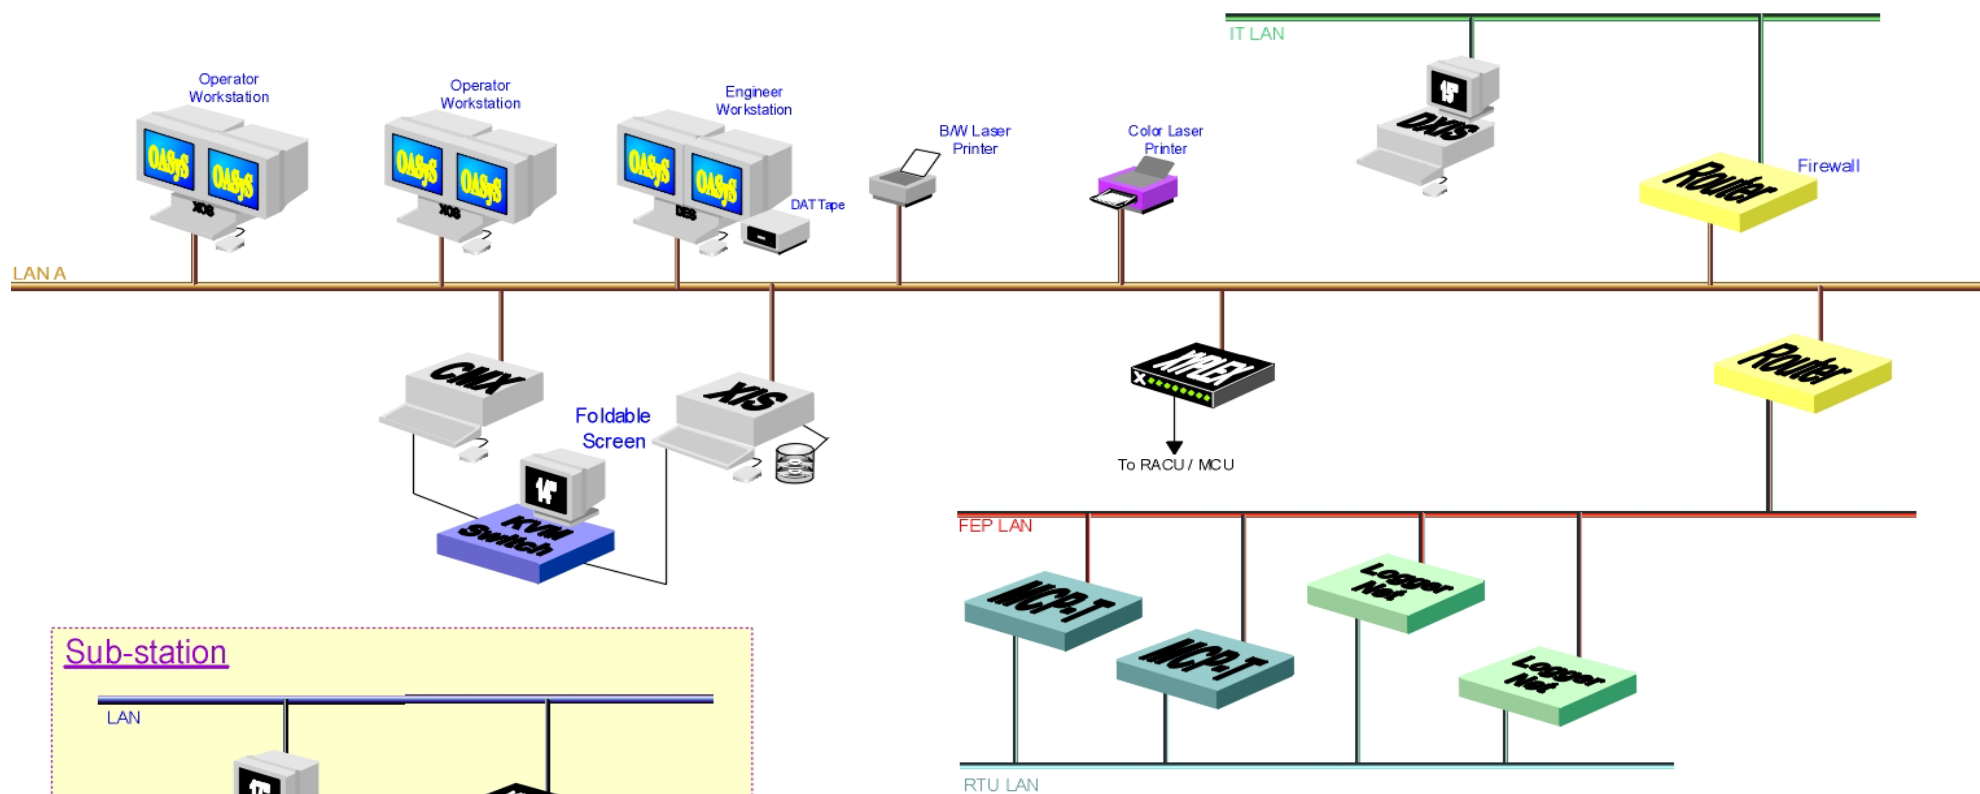

# Water Management SCADA System (WMSS)

## WMSS Primary Control System

# Water Management SCADA System (WMSS)

## WMSS Backup Control System

## Sub-station

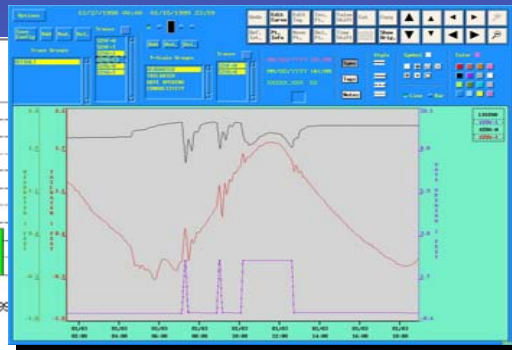

## WMS Components: Information Management

### Systems

- Data(base) management/warehousing
- Data verification and validation
- Quality control/quality assurance
- Analysis, Web publishing

### Operations

- Water Resources Management
- Public Works
- External stakeholders (DEP, USACOE, USGS, etc.)
- Public access by Web, reports, etc.

(ITD) Infrastructure & Application Services/EMA

## **WMS Ongoing Improvements**

- **Conversion of all field sites to real-time telemetry**
- **Increase communications bandwidth and reliability**
- **New WMSS and consolidation of all SCADA systems**
- **Dedicated system for enterprise access and consistent interface**
